PROFESSIONAL PROFILE

Data Management Professional at Bloomberg and MSc Data Science graduate with a First-Class BSc background. I specialize in the architecture of financial data systems, focusing on data engineering and software engineering. My technical expertise includes Python and C++, with experience developing software and deep learning models for financial research. I am focused on building scalable applications and understanding the technical architecture of global financial markets.

PROFESSIONAL EXPERIENCE

Data Management Professional | Bloomberg LP ***Sep 2026 – Present***

- Facilitate the ingestion, validation, and maintenance of high-quality datasets to support downstream analytics and enterprise products.

Consultant Data Engineer | University of Exeter Students' Guild ***Nov 2025 – Jan 2026***

- Architected and prototyped an automated data pipeline infrastructure to modernize legacy ingestion processes and reduce manual system overhead.
- Designed a scalable cloud architecture on Microsoft Azure, establishing the backend data layer required for secure CRM integrations and future machine learning deployments.

Data Science Intern | Ekimetrics ***Jun 2025 – Aug 2025***

- Applied advanced data science techniques and marketing mix modelling (MMM) to optimise marketing spend and drive business performance for retail, automotive, and financial services clients.
- Built robust data transformation workflows to clean, ingest, and structure high-volume data, ensuring system reliability and data integrity for downstream applications.

Academic Tutor | MyTutor ***Jan 2025 – Sep 2025***

- Deliver personalised GCSE and A-Level tutoring in Computer Science, focusing on algorithmic logic, programming fundamentals, and systematic problem-solving techniques.

PROJECTS

Tabular Deep Learning for Algorithmic Trading: Cross-Regime Bayesian Optimisation for Equity Signal Generation | Python

- Engineered a high-performance Python backtesting platform for algorithmic trading, integrating multi-model pipelines (TabNet, XGBoost) and deploying an interactive frontend dashboard. The best strategy, an XGBoost-TabNet ensemble, beat the S&P 500 with a 51.26% return and 2.44 Sharpe ratio, explorable via an interactive dashboard.

Comparative Evaluation of Neural Architectures for Sentiment Analysis | Python

- Evaluated various neural network architectures for sentiment analysis on financial news, comparing MLPs, LSTMs, and Transformer models, achieving an accuracy of 90%.

Portfolio LLM | Python

- Built a full-stack application leveraging Large Language Models, implementing a backend retrieval system to index documents and process natural language queries via semantic search.

Commercial KPI Dashboard | Python

- Built a web-based KPI dashboard during my internship at Ekimetrics.
- Architected an end-to-end automated ETL pipeline, handling raw data extraction and transformation to serve a web-based reporting application, reducing manual effort and improving decision-making efficiency for commercial teams.

Credit Risk Analysis Blog Post | Python

- Conducted credit risk analysis using Python and Quarto, applying logistic regression, random forest, and XGBoost (92.8% accuracy) models to evaluate defaults, model fairness, and estimate causal treatment effects.

EDUCATION

MSc Data Science | University of Exeter ***Sep 2025 – Sep 2026***

- **Relevant Modules:** Machine Learning (97%), Deep Learning (92%), LLMs and Applications (85%), Learning from Data (97%), Data Systems (75%), Programming with Python (96%), Introduction to Data Science (83%)
- **Dissertation:** Tabular Deep Learning for Algorithmic Trading: Cross-Regime Bayesian Optimisation for Equity Signal Generation

BSc Sports and Exercise Medical Science | University of Exeter | *First Class Honours* ***Sep 2022 – Jun 2025***

- **Relevant Modules:** Applied Data Science (75%), Data Science in Economics (79%), Experimental Design and Statistics (75%), Foundations of Biomechanics (75%), Biomechanics and Kinesiology (86%)

A Levels | Tanglin Trust School | Computer Science (A*), Biology (A*), Physical Education (A*) ***Sep 2020 – Jul 2022***

ACTIVITIES

- **University of Exeter Touch Rugby 1st Team** (UOETRC) - BUCS Champions 2025 ***Sep 2024 – March 2026***
- **South West Saxons Touch Training Squad** ***Sep 2024 – March 2026***

SKILLS

Technical Skills

- C++, Python (Pandas, Numpy, Matplotlib, Sklearn, Pytorch), Git, Bash, Docker, CI/CD, Linux, Azure Cloud, VSCode

Core Skills

- Problem Solving, Communication, Teamwork, Scientific Writing, Critical Analysis, Time Management, Attention to Detail
